LIVING IN A SUSTAINABLE HOME

Making your home more energy and water efficient is one of the best ways you can have a positive impact on the environment.

Switching to solar energy is a great way to reduce your dependency on fossil fuels and save money over a long period of time. Whether you're remodelling or just looking to upgrade some existing fixtures*, switching to low-flow showerheads, faucets, and toilets is a great way to save water and money.

Introduction

I have never really cared about living in a sustainable home but your latest blog post has made me think about it and that's why I decided to share my thoughts.

Referring to
the blog post

We all know that our existence is endangered by big climatic changes and we should do our best to protect the environment. I agree with you that building energy and water-efficient houses is the best way to have a positive impact on the environment.

Main part
with your
arguments,
examples to
support
your
opinion.

Sustainable homes require a lot of money and time. Whether you want to build a new house or remodel your old one, you need to spend a lot of money on high-technological and eco-friendly devices which need to be interconnected and this is all quite expensive. That is why only a minority of the population can afford it nowadays.

Well, there are some ways to make our current houses more sustainable. When we buy new things and devices for our house, we should always choose the eco-friendly ones such as energy-saving bulbs and electrical devices, or water-saving showerheads, faucets or toilets. Some people can switch to solar energy and install solar panels on the roofs of their houses which would reduce their dependence on fuel fossils and protect the environment. But, more importantly, we can change our daily habits and try to use water and energy more wisely, for example turning off the water when brushing our teeth or switching off the lights when we leave a room.

Conclusion

Well, that's just how I think about the topic. I am looking forward to more comments and your new posts in the future!
